Lab 4 Specifications

Lab-specific Specifications

Proficiency

☐ Design plays *Für Elise* from provided starter code
☐ Note durations match the durations specified in the starter code for *Für Elise* (i.e., the tune plays at the correct tempo)
☐ Individual pitches are accurate to within 1% across the frequency range (of 220-1000 Hz) (calculations should be provided in the report to verify this)
☐ All rests (pauses with no sound) are played properly
☐ Code uses `#define` macros for memory-mapped registers

Excellence

☐ Report contains accurate calculations for **minimum duration** supported
☐ Report contains accurate calculations for **maximum duration** supported
☐ Report contains accurate calculations for **minimum frequency** supported
☐ Report contains accurate calculations for **maximum frequency** supported
☐ Report provides documentation and calculations to show that the durations and pitches are correct based on the timer configuration.
☐ Design contains potentiometer to control the output volume.
☐ Design plays an extra composition of your choice. You need not compose the tune from scratch, it is acceptable to transpose an existing tune.

General Specifications

Proficiency

General Schematic Specifications

☐ All pin names labeled
☐ All pin numbers labeled
☐ Crossing wires clearly identified as junction or unconnected
☐ Neat layout (e.g., clear organization and spacing)
☐ All parts labeled with part number
☐ All component values present

Block Diagram

☐ Block diagram present with one block per SystemVerilog module
☐ Each block includes all input and output signals

HDL & Code Specifications

General Formatting

☐ Descriptive filename (e.g., `lab2_jb.sv`)
☐ Descriptive variable names
☐ Neat formatting (e.g., standard indentation, consistent formatting for variable names (kebab-case/snake_case/camelCase/PascalCase))
☐ Descriptive and clear function/module names

Comments

☐ Comments to indicate the purpose of each function/module

Lab Writeup/Summary

☐ Brief (e.g., 3-5 sentence) description of the main goals of the assignment and what was done.
☐ Explanation of design approach. How did you go about designing and implementing the design?
☐ Explanation of testing approach. How did you verify your design was behaving as expected?
☐ Statement of whether the design meets all the requirements. If not, list the shortcomings.
☐ Number of hours spent working on the lab are included.
☐ Writeup contains minimal spelling or grammar issues and any errors do not significantly detract from clarity of the writeup.
☐ (Optional) List comments or suggestions on what was particularly good about the assignment or what you think needs to change in future versions.

Excellence

General Schematic Specifications

- ☐ Standard symbols used for all components where applicable
- ☐ Signals "flow" from left to right where possible (e.g., inputs on left hand side, outputs on right hand side)
- ☐ Title block with author name, title, and date

HDL & Code Specifications

General Formatting

- ☐ Name, email, and date at the top of every file
- ☐ Comment at the top of each source code file to describe what is in it
- ☐ Clear and organized hierarchy (e.g., delineation between top level modules and submodules)

Testbenches

- ☐ Testbenches written for each individual module to demonstrate proper operation
- ☐ Testbench output included in the report

Lab Writeup/Summary

- ☐ Writeup is free of spelling and grammar issues

Comments

Add specific notes here about the assignment.
